

OIC specification
OCI stands for “Open Container Initiative” specification, has been formed. The goal of this organization/ specification is to standardize the way

1. container images are build or packaged
2. how containers are spawned and managed on the operating system of the computer

The oci specification has standardized:
1. oci images = standardized the way the images are build or packaged
2. oci runtime = standardized the way the containers are created and managed on the underlying operating.

container engine (operating system) #based on oci specification
