

HELM2 VS HELM3 Architecture

There are 2 versions of the HELM are available

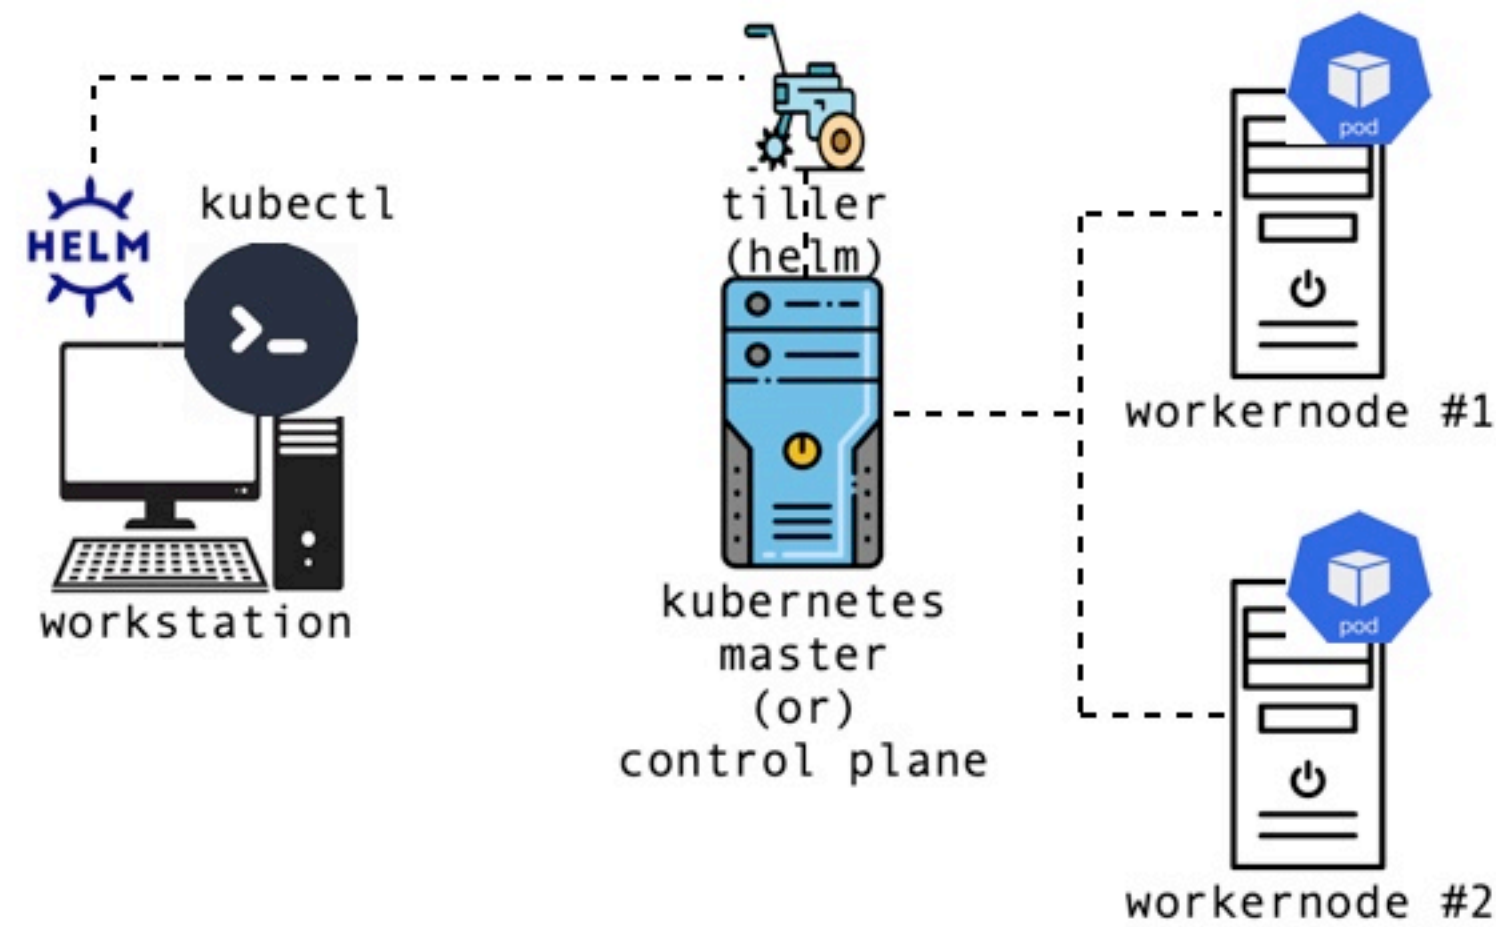

- 1. HELM2
- 2. HELM3

There is no difference interms of helm charts from helm2 to helm3, all the things like

- 1. chart directory structure
- 2. manifests
- 3. packaging

are exactly same. This means HELM3 is backward compatible with HELM2, the charts that are written with HELM2 version can be used aspart of HELM3. The only difference is the way the HELM works in deploying the objects onto the cluster.

HELM2 Architecture

HELM3 Architecture
